### *VE CORNER* by Pat Stone, AC3F

The AERO VE Team held its third annual FD test session on Saturday, June 24th, 2017 at the Essex Sky Park. We served 10 applicants. Congratulations to new Extra Don N1TTX, new Generals Ray N3RES and Scott KG7CKE, and new Techs Jeff KC3JLR, Steph KC3JLS, Marc KC3JLT, Joyce KC3JLW, Jasmine KC3JLU, and James KC3JLV.

A very special thanks to VE's: WB3FMT, KD3TP, KB3VAE, KC3FBL, KC3FBM, KB3KRV, and K2ODG for assisting me with this session. You all did a great job as usual. It was a pleasure working with all of you. A special thanks to Jerry N3VBJ for assisting our examinees and delivering the new HTs to 4 of the new hams who successfully completed their exams at this session.

Our next test session will be held at 1:15PM on Sunday, Sept. 10th, 2017 at the White Marsh library. Hope to see you there.

## DID YOU KNOW ...?

### Q SIGNALS

Q-signals are a system of radio shorthand as old as wireless and developed from even older telegraphy codes. Q-signals are a set of abbreviations for common information that save time and allow communication between operators who don't speak a common language. ## Do you remember Aunt Sally?

Raise your hand, good then! Please go up to the blackboard for a little test. Dear Aunt Sally is a Mnemonics (a word or jingle used as a short cut memory jogger). Please Excuse My Dear Aunt Sally is the sequence of math order when solving a math problem. P Parentheses, E Exponents, Multiplication, D Division, A Addition, S Subtractions. There are a host of others.

For the most part amateur astronomers don't normally have to deal with complex math problems. When they do there is plenty of help. The Astronomical League publishes a book entitled *Math for Amateur Astronomers* by James H. Fox.

This publication cost about \$10.00 and covers topics such as: Simple Optics, Astrophotography, Time, Navigation, Orbits, Data Preparation and more.

I have found the following to be the most used math equations and assumptions:

**Power** = Telescope Scope FL mm / Eyepiece mm  
SCT 8" 2032/40 = 51x

**Apparent Field (AF)** = 46° (Mfg specs)

**Actual Field (TF)** in ° = AF/eyepiece power  
46/51 = .9° Actual Field TF

**Field of View in arc minutes** = TF \* 60

**Convert degrees to feet** at 1,000 yards (3,000 ft)  
= Actual Field \* 52.5 .9\*52.5 = 47.25 feet

**Maximum Useful Magnification** is 50x per inch or 2x the diameter of the objective lens in mm.

You can also build an Excel spreadsheet to computer the useful value for all of your eyepieces. And then add the new lens when you get them.
